

Our program has ranked in the top 10% of rehabilitation hospitals nationally by Uniform Data System (UDS)!

Our top-performer designation is based on our ranking in the top deciles of UDS for the Medical Rehabilitation program evaluation model for more than 800 facilities, a report card for rehabilitation settings. UDS maintains the world's largest database for medical rehabilitation outcomes. That means your patients will get outstanding care, designed to help them regain as much function as possible.

What Does It Mean to Be in the Top 10%?

UDSMR considers all facilities that rank in the top 10% of the database as top program performers, recognizing their delivery of quality patient care as effective, efficient, timely and patient-centered.

Top 10% hospitals typically have a higher-than-target discharge to community and lower-than-target percentage of return to acute care during the rehab stay.

Top 10% hospitals typically have greater than 77% of their patients exceed the case level facility targets for discharge quality measures – self-care score and mobility score, change in self-care score and mobility score and functional efficiency.

Reach out to us if you have a patient struggling with activities of daily living, mobility or decreased range of motion due to a fall, surgery or illness such as a stroke.

We can evaluate the patient for admission to an inpatient rehabilitation program, and provide an individualized treatment program to increase independence and function.
